

**HIGH-TORQUE LOW-SPEED BRUSHLESS
SERVO MOTORS FOR DIRECT DRIVE**

ALXION of France have, in collaboration with the French National Agency for Advanced Research, developed an exclusive range of high-torque low-speed brushless servo-motors

Motors are useful in the tyre and glass industry, printing machines, wire-tube bending machines, machine tools, robotics, etc. The range includes 7 main motors performing continuous

for direct drive applications. This technology permits the removal of gear boxes or any system of reduction (less wear, less noise, no backlash) and the use of the motor's hollow shaft. The servo

torque from 26 Nm to 460 Nm, peak torque from 78 Nm to 1700 Nm and for rated speed of 800 rpm to 200 rpm; peak power can reach 20 kW. Buyers and distributors
