

August 2009: FAIRWIND extends its range of Vertical Axis Wind Turbines

FAIRWIND, www.fairwind.be, has just installed its new F64-10 VAWT delivering 10 KW at a windspeed of 9 m/s only for an annual energy generation of 30000 KW.h. That new wind turbine brings a complement of upper level to the existing model F16- 10 delivering 10 KW at 14 m/S with an annual energy generation of 8800 KW.h. The F64-10 VAWT is equipped with a frameless alternator 500STK9M operating in direct drive without gear. One can particularly note the compact design and the silent operation of that wind turbine.
