

## December 2009: SEAB ENERGY unveils wind turbine WINDBUSTER

The company SEAB ENERGY ([www.seabenergy.com](http://www.seabenergy.com)) based in Ringwood, Hampshire, close to London, recently unveiled its WINDBUSTER wind turbine . It is a Vertical Axis Wind Turbine with a 5 KW rated power dedicated to sites with changeable wind direction. WINDBUSTER does not need to change the blades orientation because the blades have a helical shape allowing to better exploit the power coming from all directions winds. Seab Energy's aim is to fulfill all the energy needs of a 4-people family. The silent operation is a particular figure of merit. The wind turbine uses a frameless alternator 400STK3M without speed multiplier.
